

How to ship safely...

drefahlaudio

Microphones and related electronics shall be protected well during transport.
Shipping damage is easily avoided though:

1. Do not use worn out or crushed boxes, as they will get squashed when stacked.
Highly fragile items should be double-boxed.
Mouldy boxes and padding may be rejected (sorry, I'm allergic...)
2. Use clean, dry and dust-free cushioning material only. Condenser microphones in particular are sensitive to any kind of contamination.
3. Protect microphones and electronics against dust and moisture. An inner bubble wrap is ideal and offers good shock protection at the same time.
4. Stuff gaps with bubble wrap, foam chips or crumpled paper, to prevent heavy items from bumping against each other (power supplies in particular)
5. Please use adhesive tape for outer packaging only. This simplifies unpacking at our end and saves valuable working time.
- 6. LASTLY: Help us protect the environment by packaging in a way that allows easy reuse of all packaging material. NO waste is the best waste ! :-)**

Thank you !
