

How to ship safely...

drefahlaudio

Microphones and related electronics should be protected well during transport. Shipping damage can be easily avoided however:

1. Do not use heavily worn or crushed boxes, as they may break when stacked during transport (highly fragile items should be double-boxed).
2. Use clean, non-crumbly packing materials only. Condenser microphones in particular are sensitive to any form of pollution.
3. Protect microphones and electronics against dust and moisture. Bubble wrap is ideal and offers shock protection at the same time.
4. Stuff gaps with bubble wrap, foam chips, crumpled paper or the like, to prevent items from colliding when the parcel is shaken.
5. Please use packing tape for outer packaging in the first place. This makes unpacking easier for us, and materials can easily be reused for return shipping :-)

Thank you !
